

TONO

Foster + Partners PORCELANOSA

the design CONCEPT

TONO asks the important questions first. What's the most efficient volume of water? How can controls be made genuinely intuitive? Aesthetics derive from functionality and the innate properties of the materials used. With sinks incorporating an offset circle motif, each element has been consciously created to be quiet, purposeful and exact.

design & collaboration

No other organisation has a product palette as wide as Porcelanosa's. Marble, ceramics, Krion, timber, brassware and stainless steel. Its wide range of materials and techniques now meets with the vision of Foster+Partners in a perfect combination. TONO offers architects and designers a new insight in bathroom design. Two companies, one philosophy, infinite possibilities.

development & sustainability

The result of physical making rather than theoretical ideas, the performance of each TONO product has been optimised through rigorous testing, prototyping and human interaction. Together, Foster + Partners and Porcelanosa pushed themselves to develop something out of the ordinary: individually crafted components that simultaneously work holistically and harmoniously.

development

No more, no less. Just as eliminating superfluous detail makes for better design, it also enhances sustainability. As embodied by the 2.3 litre capacity TONO sink, which provides the right amount of water while cutting down on waste. Taps can be adjusted for optimum flow, while natural materials age beautifully.

CASA MANÀ

Los baños se pueden adaptar al gusto y al contexto. TONO es el ejemplo de cómo todos los elementos pueden funcionar juntos.

In this Formentera house, each room becomes a real piece of art. The finishes used, blended with the landscape, unveil a clear and minimalist architecture. There is no decoration needed in a space that stands out because of its elements. The master bathroom is furnished with pieces designed by Foster+Partners and Porcelanosa. the bathtub and the washbasin are made of Krion, a mineral compound of high purity that matches perfectly in this space with chromed taps. A timeless touch.

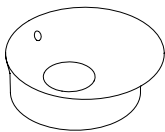

BASINS

Sinks, either countertop or wall-mounted, are the perfect blend of functionality and minimalism. An example of this features is the concealed clicker mechanism.

OLHÃO HOTEL

Olhao is a hotel to dream about. A place that inspires you to appreciate life while having a bath in the Tono bathtub or enjoy a wellness moment under the shower.

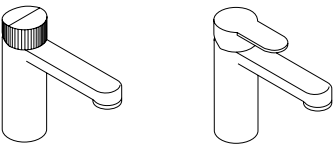

BRASSWARE

Taps are shaped to catch the light. The bevelled cut on the control lever together with the textured surface are the key to lure curiosity towards its performance system.

CONTACTLESS BATHROOM

Electronic taps with automatic sensors are the solution that guarantees health and safety in the bathroom as they are touchless operated.

We are constantly in contact with the world through our hands and they act as a connecting thread between our bodies and external elements. Further than washing our hands to prevent the spread of infections and germs, there are now technological solutions that are an efficient barrier to protect ourselves and others. Moreover, electronic taps reduce water consumption as the tap opens and closes automatically guided by movement without having to touch it.

SAVAGE HOUSE

This urban retreat in the capital city of Vietnam, Ho Chi Minh, fosters an oasis of calm by integrating a combination of plants and lots of light.

KRION ACRYLIC STONE

Freestanding bathtubs have become the central element of bathrooms. In this collection designed by Foster+Partners for Porcelanosa, we can find them in different finishes and materials, providing a wide range of features in the same element. Krion bathtub are comfortable to touch, hygienic and safe thanks to the low porosity of this material that avoids bacteria proliferation.

Greater resistance, durability and easy maintenance are the three features that define acrylic bathtubs. Finally, the grandeur of natural stone makes these bathtubs a unique product since every stone is unique. This product turns out to be a collectible that everybody would love to have.

BATHTUB

Despite its minimalist design, this bathtub includes hydromassage equipment to create an incredible atmosphere of well-being, the convenience of a home spa. The elegance and strong personality of the built-in bathtub are linked to the revitalization therapies for body and soul provided by the hydrotherapy and chromotherapy systems.

The Air equipment is a propulsion of air bubbles that create a soft and involving massage for the user to enjoy. The air + equipment also introduces chromotherapy lights, a combination of colors that have a positive influence in our mood.

Different options of this signature piece: a freestanding bathtub and a concealed bathtub of 190, 180 and 170 cm. Made of lucite acrylic, a material that is comfortable to touch and highly durable, as well as having a good heat retention and a bright look that lasts over time.

CENIT HOUSE

The bath concept in an urban utopia.

TOILET

Wall-hung toilets made of high compact ceramics that guarantees exceptional resistance. The pure white ceramic tone provides a roomy and serene look in a minimalist bathroom. Moreover, sustainability is not forgotten since they are installed with reduced flush cisterns of 4.5-3 liters capacity.

PERDIGÓ HOTEL

A composition of idyllic villas in Bali. All of them built with wooden materials and its own infinity pool, a place to let yourself go.

FURNITURE

Completing TONO's attention to detail, furniture is a key part of the concept. Sliding storage units are built into the mirrors and lights are conveniently positioned around their circumference for perfect and elegant illumination. A horizontal bench unifies this design where pure lines of the make-up desk optimise the space due to its flawlessly engineered drawers.

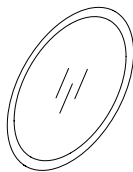

MIRRORS

As well as different finishes, TONO mirrors not only incorporate lights around their circumference for perfect lighting but also a tactile sensor control and demister function.

ACCESSORIES

The practical minimalism by Foster + Partners is also reflected in the accessories. A wide range of towel rails, robe hooks, soap dispensers and other elements provide a distinctive touch to each bathroom.

TOWEL WARMER

Our passion for the design of contemporary bathrooms through elements which combine aesthetics and functionality has led us to develop different product lines to offer a complete set of bathroom fittings which also accommodate secondary elements, often unnoticed but nevertheless crucial when creating comfortable rooms.

PURE MODULARITY AND VERSATILITY

The collection stands out because of its modularity, offering multiple possibilities in terms of combinations between the different elements. Aiming to create modern and creative bathroom spaces. TONO adapts to all needs, offering a bathroom design without forgetting practical features.

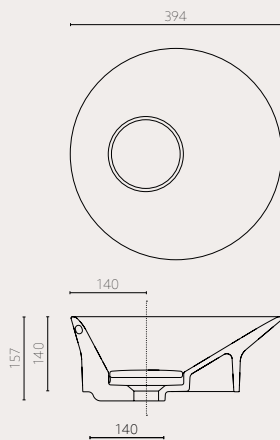

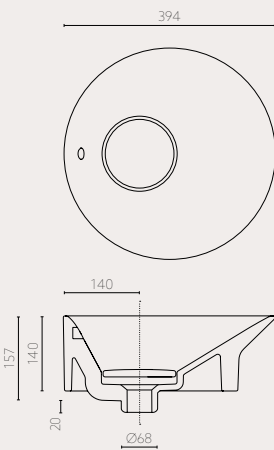

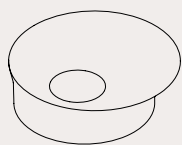

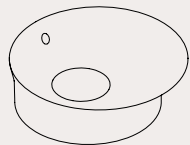

Tono sees pieces with a signature seal made of high-quality materials, which go hand in hand with harmony while improving people's quality of life. A comprehensive and built-in bathroom with an endless selection of finishes and materials. The equipment which needs a custom-made bathroom.

Natural Stone

All products in the TONO range are precision-manufactured and finished by hand to achieve their distinctive satin appearance. TONO One and TONO Elements are available in limestone or different types of marble, as follows:

- Habana Dark
(European marble, with big colour variations among items)
Bulk density
UNE EN 1936:2007 2640 Kg/m3
- Capuccino Grey
(Asian marble, with big colour variations among items)
Bulk density
UNE EN 1936:2007 2818 Kg/m3
- Calgary
(Asian limestone, with slight colour changes among items)
Bulk density
UNE EN 1936:2007 2200 Kg/m3

Product protection
Each item in the TONO range is given a specific treatment to enhance the characteristics of the material and to protect it from external agents. PORCELANOSA uses a high-quality water and oil-based repellent sealer that protects the stone from moisture, saltpetre and other household stains. It also enhances the natural colour of the stone.

No two natural products are exactly alike. The subtle differences between each item make them unique and impossible to replicate.

Care and Maintenance
For ordinary cleaning, a powerful cleaner with a neutral pH should be used. This gives fast, efficient results, without affecting the product's protective treatment. Dilute a capful of stone cleaner in a bucket of warm water and mop the product. It's not necessary to rinse it afterwards with water.

In the event of stains or marks caused by acidic substances (lemon, cola, tomato juice, lime-scale remover, wine, vinegar, etc) these can be removed using a suitable restoration kit, available from L'Antic Colonial sale points.

To remove organic stains, dyes and felt-tip pen, use a specific stain remover for stone.

To renew or increase the shine of TONO stoneware, use a natural wax specifically for stone. To apply, dilute the wax as required, rub it onto the surface and, after a few hours, gently wipe off with a soft cloth to obtain the required shine.

Natural Wood

All TONO Elements made of wood are crafted using selected species of trees from sustainably managed forests. All oak is from Europe, and all walnut and maple from North America.

Product protection
All TONO natural wood products come specially protected with a highly effective microporous blend of plant oils and waxes. This treatment has a high mechanical and chemical resistance, and conserves the wood's natural appeal while improving its durability and resilience. Dirt and water repellent, it's resistant to wine, beer, cola, coffee, tea, fruit juice and milk stains, in accordance with DIN 68861-1A.

Care and Maintenance
To remove dust, grease stains or fingerprints, dissolve mild soap in a container of warm water. Wipe the furniture with a damp cloth, and then dry all the surfaces, especially the corners, with a soft clean dry cloth. When cleaning the products, never use sharp objects, rough scouring pads, solvents, bleach, nail polish remover, vinegar, citric acid, abrasive products or polishes. Avoid using aggressive all-purpose cleaners. The protective surface can be renewed at any time without having to sand it first by applying a new layer of the oil/wax-based treatment recommended by PORCELANOSA.

Sanitaryware

Sanitaryware from the TONO One and TONO Elements ranges is made of Noken Ceramic®. This is comprised of a specific formula containing clay, kaolin, feldspar and quartz.

Using only the finest raw materials and temperatures of 1520°C, a pure white colour and superior physical properties can be achieved. These include a very compact material, higher impact resistance and greater flatness. The chemical formula of Noken Ceramic® and its glaze give TONO sanitaryware a scratch-proof, hypo-allergenic, vitrified surface with no pores. It's also resistant to thermal shock.

Care and Maintenance
To clean and care for TONO sanitaryware:

Clean the external parts with water and soft soap (preferably liquid), using a non-abrasive damp cloth. Clean the internal parts (inside the toilet pan) with a disinfectant soap detergent, using a soft sponge.

Always try to avoid granulated soaps, abrasive cosmetic products, cosmetic liquids or similar, and abrasive sponges. When cleaning the inside of the cistern, avoid using chemical products that might damage the internal components and mechanism.

Do not throw large amounts of toilet paper down the toilet, or products that might clog the siphon.

Avoid detergents with hydrofluoric acid. This attacks the glaze, causing porosities that will affect the product's appearance.

Krion® bath

KRION® is a latest-generation solid surface developed by PORCELANOSA. It's made of two-thirds natural minerals (ATH –aluminium trihydride) and a low percentage of high-resistance resins.

KRION® is a fully recyclable sustainable material. All products made of KRION® can be reprocessed and re-used. KRION® does not release volatile compounds, in keeping with PORCELANOSA's environmental commitments. KRION® is easily repairable and can be restored to its original appearance, significantly increasing its lifetime and reducing the need to replace it. In this way, it meets international environmental guidelines on durability.

Thanks to its properties and constant efforts in the field of development, KRION® has been awarded key environmental certificates such as Greenguard, Greenguard Gold and REACH.

Care and Maintenance

To clean an item made of KRION®, use a white fibre sponge and mildly abrasive cleaning product (powder cleaner). Rub it in gently, using circular movements, and then rinse it with plenty of water. To clean more stubborn stains, use a blue fibre sponge.

Do not use products that contain organic solvents (alcohol, acetone, ammonia, and fragrant compounds) or aggressive cleaning products such as bleach, hydrochloric acid, caustic soda, lime-scale remover or detergents containing anionic surfactants.

Brassware

TONO Brassware has been designed, developed and manufactured according to the highest standards. PORCELANOSA chooses only the finest raw materials and components, using internationally-accepted alloys and certified internal parts.

TONO bodies are made of brass. Strict attention is paid to all parts directly in contact with water, particularly those subject to drinking water regulations. Chrome and PVD finishes guarantee both resistance to wear and tear and a beautiful appearance.

The durability of PORCELANOSA cartridges is tested to more than twice the relevant requirements, guaranteeing reliability and smooth performance.

Since bathrooms are places where a good deal of water is consumed, environmental awareness is a key priority in the manufacture of TONO products. PORCELANOSA applies cutting-edge technologies to the manufacture of its mixers and showers, in order to reduce water consumption and save energy.

Care and Maintenance

For regular cleaning, use only warm soapy water. If this is not possible, use soft non-abrasive gels or similar cleaning products. Rinse them away thoroughly afterwards and polish with a soft cloth. Avoid using abrasive products such as scouring powder or products containing phosphoric acid, hydrochloric acid, formic acid or acetic acid, as these might badly damage the product. Only use cleaning products with a neutral pH. After cleaning or using brassware, dry it to prevent lime scale.

Acrylic

PORCELANOSA acrylic bathtubs have a warm smooth surface that feels comfortable to the touch. They are excellent at retaining heat compared to bathtubs made of other materials. PORCELANOSA acrylic has the strength, durability and toughness to withstand frequent use. It's resistant to everyday wear and tear, staining and superficial scratches, and is also antibacterial.

Owing to its low weight, PORCELANOSA acrylic is easy to install, helping to reduce transportation costs and allowing savings to be made on structural support.

Our cast acrylic sheets – made of poly-methyl methacrylate (PMMA) – can be recycled, converting them back to the original raw material.

Care and Maintenance

For regular cleaning, use only warm soapy water. If this is not possible, use soft non-abrasive gels or similar cleaning products. Rinse them away thoroughly afterwards and polish with a soft cloth. Avoid using abrasive products such as scouring powder or products containing phosphoric acid, hydrochloric acid, formic acid or chlorinated hydrocarbons, as these might badly damage the product. Only use cleaning products with a neutral pH. After cleaning or using acrylic, dry it to prevent lime scale.

Foster + Partners and Porcelanosa

Foster + Partners is a global architecture, engineering and design studio, characterised by its integrated approach to design. Together with Porcelanosa, a global bathroom manufacturer with expertise across a wide range of products and materials, it has created a comprehensive and co-ordinated range of bathroom products that could be used in a multitude of settings, from residential to commercial interiors and everything in between.

The result of this ambitious project is TONO Elements and TONO One – a set of components designed to work together as part of an integrated system, with a wide choice of finishes and materials. Unified by a common, simple design language and palette of complementary materials and colour tones, the minimalist aesthetic brings to the fore an honesty of material, simplicity of form and the craft of manufacture.

The PORCELANOSA GROUP is present
in around 100 countries

Today, the PORCELANOSA GROUP
is a benchmark company in the
national and international market,
founded on values such as innovation
and quality but, above all, based on
confidence in its extensive workforce
of almost 5,000 people and attention
to the social environment.

With over 40 years of experience,
PORCELANOSA GROUP is present in
around 100 countries worldwide, due
to its unique business model, which
supports a strong corporate strategy.
It is currently one of the Spanish
companies with worldwide recognition,
according to a report published by the
consultants PricewaterhouseCooper
and the Financial Times.

Manufacturing diversification has
been the mainstay in corporate
expansion which started exclusively
with the manufacture of tiles. Currently,
the eight companies of the Group offer
an extensive range of products which
include kitchen and bathroom designs
and advanced construction solutions
for contemporary architecture.
